By L. H. ALBERTY

PREFACE

These tables have been published in view of the fact that a rapid and accurate way of figuring prices on wood bills, particularly in manual training work is needed.

On the following pages may be found the answers to 20,736 problems from the very smallest pieces up to a 1"×16", 12' long and at any priced lumber up to and including 20¢ per board foot.

The first four tables give answers in board feet. The rest of them give the price of the piece of wood looked up. If the price of the piece of wood used is 6¢ then look up the size of the piece in the 6¢ table and by running down the vertical column and across on the horizontal to their intersection the price will be found in dollars and cents.

At the top of each table may be found the widths in inches, as 1"×6", 1"×8", etc. The column on the left hand side shows the lengths in feet and inches and that on the right in inches only. Either may be used.

Greater widths and lengths may be found by looking up the piece in two sections.

Grouping smaller pieces as, for example, 5 pieces 1"×2"×14" into 1 piece 1"×10"×14" makes the work easier.

Higher prices if odd, as 35¢ may be obtained by adding together prices from two tables as 17¢ and 18¢. If even as 24¢ by doubling 12¢ price.

For 2" lumber the price may be doubled or twice the width looked up.

For a 2"×4" look up a 1"×8". For a 3"×3" look up a 1"×9". For a 4"×4" find 1"×16". For 1½" or 1¼" lumber look up the price of 1" lumber and add to it ¼ that amount. For 1¾" or 1½" lumber find price of 1" lumber and add ½ that amount.

The price of 3¢ lumber may be found by using 6¢ table and dividing the result. Half cent lumber, as 1½¢ may be found by looking up 17¢ and dividing.

Manual Instructors must necessarily charge 1¢ or 2¢ more than purchase price of lumber in order to break even on account of waste by selling in small pieces.

On the last page of the book may be found a list of the various woods and spaces after them which may be filled out with the present price of the wood in your locality.

The board foot tables was worked out to five decimal places and from it the others obtained. In the printed B. F. table on the following pages, however, all places were dropped except the hundredths. If the thousandths place was more than 5 it was carried over to the hundredths; if less than 5, it was dropped. In the price tables if the mills place was more than 5 it was carried over to the cents place and if less than 5 it was dropped, the nearest cent being used.

L. H. ALBERTY.
